Basics of Research Data Management

For researchers at the
Faculty of Business and Economics

2 November 2022, 12:30–14:00

Place: Room S 15, Faculty of Business and Economics,

Peter Merian-Weg 6, 4052 Basel

Research data management is increasingly becoming an important part of academic practice. Funding organisations such as the Swiss National Science Foundation (SNSF) already require a data management plan with the project submission as well as the publication of research data, provided there are no ethical or legal reasons against it.

The aim of this event is to give you an overview of the methods and tools of research data management in the context of Open Science and FAIR. We will introduce best practices on how to implement research data management in your everyday research to make your research more efficient and at the same time meet the requirements of research funders.

Speakers: Silke Bellanger, M.A., MAS LIS (Head of Digital Services, University Library); Iris Lindenmann, M.A. (Team Open Science, University Library).

All researchers (docs, postdocs, profs, staff) of the Faculty of Business and Economics are warmly invited to this event!

Contact: researchdata@unibas.ch

On the invitation of the GSBE / Economics Lunch.
Sandwiches, coffee and water provided.
